## **BIOGEST is nominated for the US-A-BIZ AWARD 2022**

- **Austrian Trade Commission Los Angeles awards prizes to Austrian companies for special successes in the US market parallel to the Oscars**
- **BIOGEST is nominated in the category “GROWTH”**
- **Winners will be announced March 25<sup>th</sup> in Santa Monica**

Los Angeles / Vienna: BIOGEST is nominated for the US-A-BIZ Award 2022 in the category “growth”. The so-called “WirtschaftsOskar” awards top performances by Austrian companies on the US market by the Austrian Trade Commission. *“We are overwhelmed by the positive response that our business development in US has received. I am therefore particularly proud that our innovative technology has found so much international acceptance and that our export strategy was the right one.”*, says Martin Schlerka, CEO and Managing Partner of BIOGEST.

In the US - the largest and most competitive market in the world - innovation, marketing, strategy, networking, and responsiveness are key. The Foreign Trade Center Los Angeles of the Austrian Chamber of Commerce (WKÖ) is presenting the US-A-Biz Awards for its eleventh year, the business Oscar for outstanding performance by domestic companies on the US market. The winners of the US-A-Biz-Award 2022 are traditionally announced on the eve of Oscar night - March 25 - by the Austrian Trade Commission LA at a gala award ceremony at the Red Bull High Performance Center in Santa Monica, California.

***BIOGEST®** is a pioneer brand offering full-service biomethane and biogas plant solutions worldwide and is headquartered in Vienna, Austria. After more than 30 years of experience, BIOGEST completed 170+ projects by holding an active key player role in over 20 countries. The tried and tested BIOGEST technology is created to customize green gas projects from strategic planning to co-investment, construction, operation, maintenance, and management of plants. BIOGEST engages in converting organic waste into clean and renewable energy in order to combat the rise in waste production and satisfy the growing energy demand.*
